

ATRIAL FIBRILLATION
NETWORK

MAESTRIA - AFNET 10

STUDIENDESIGN

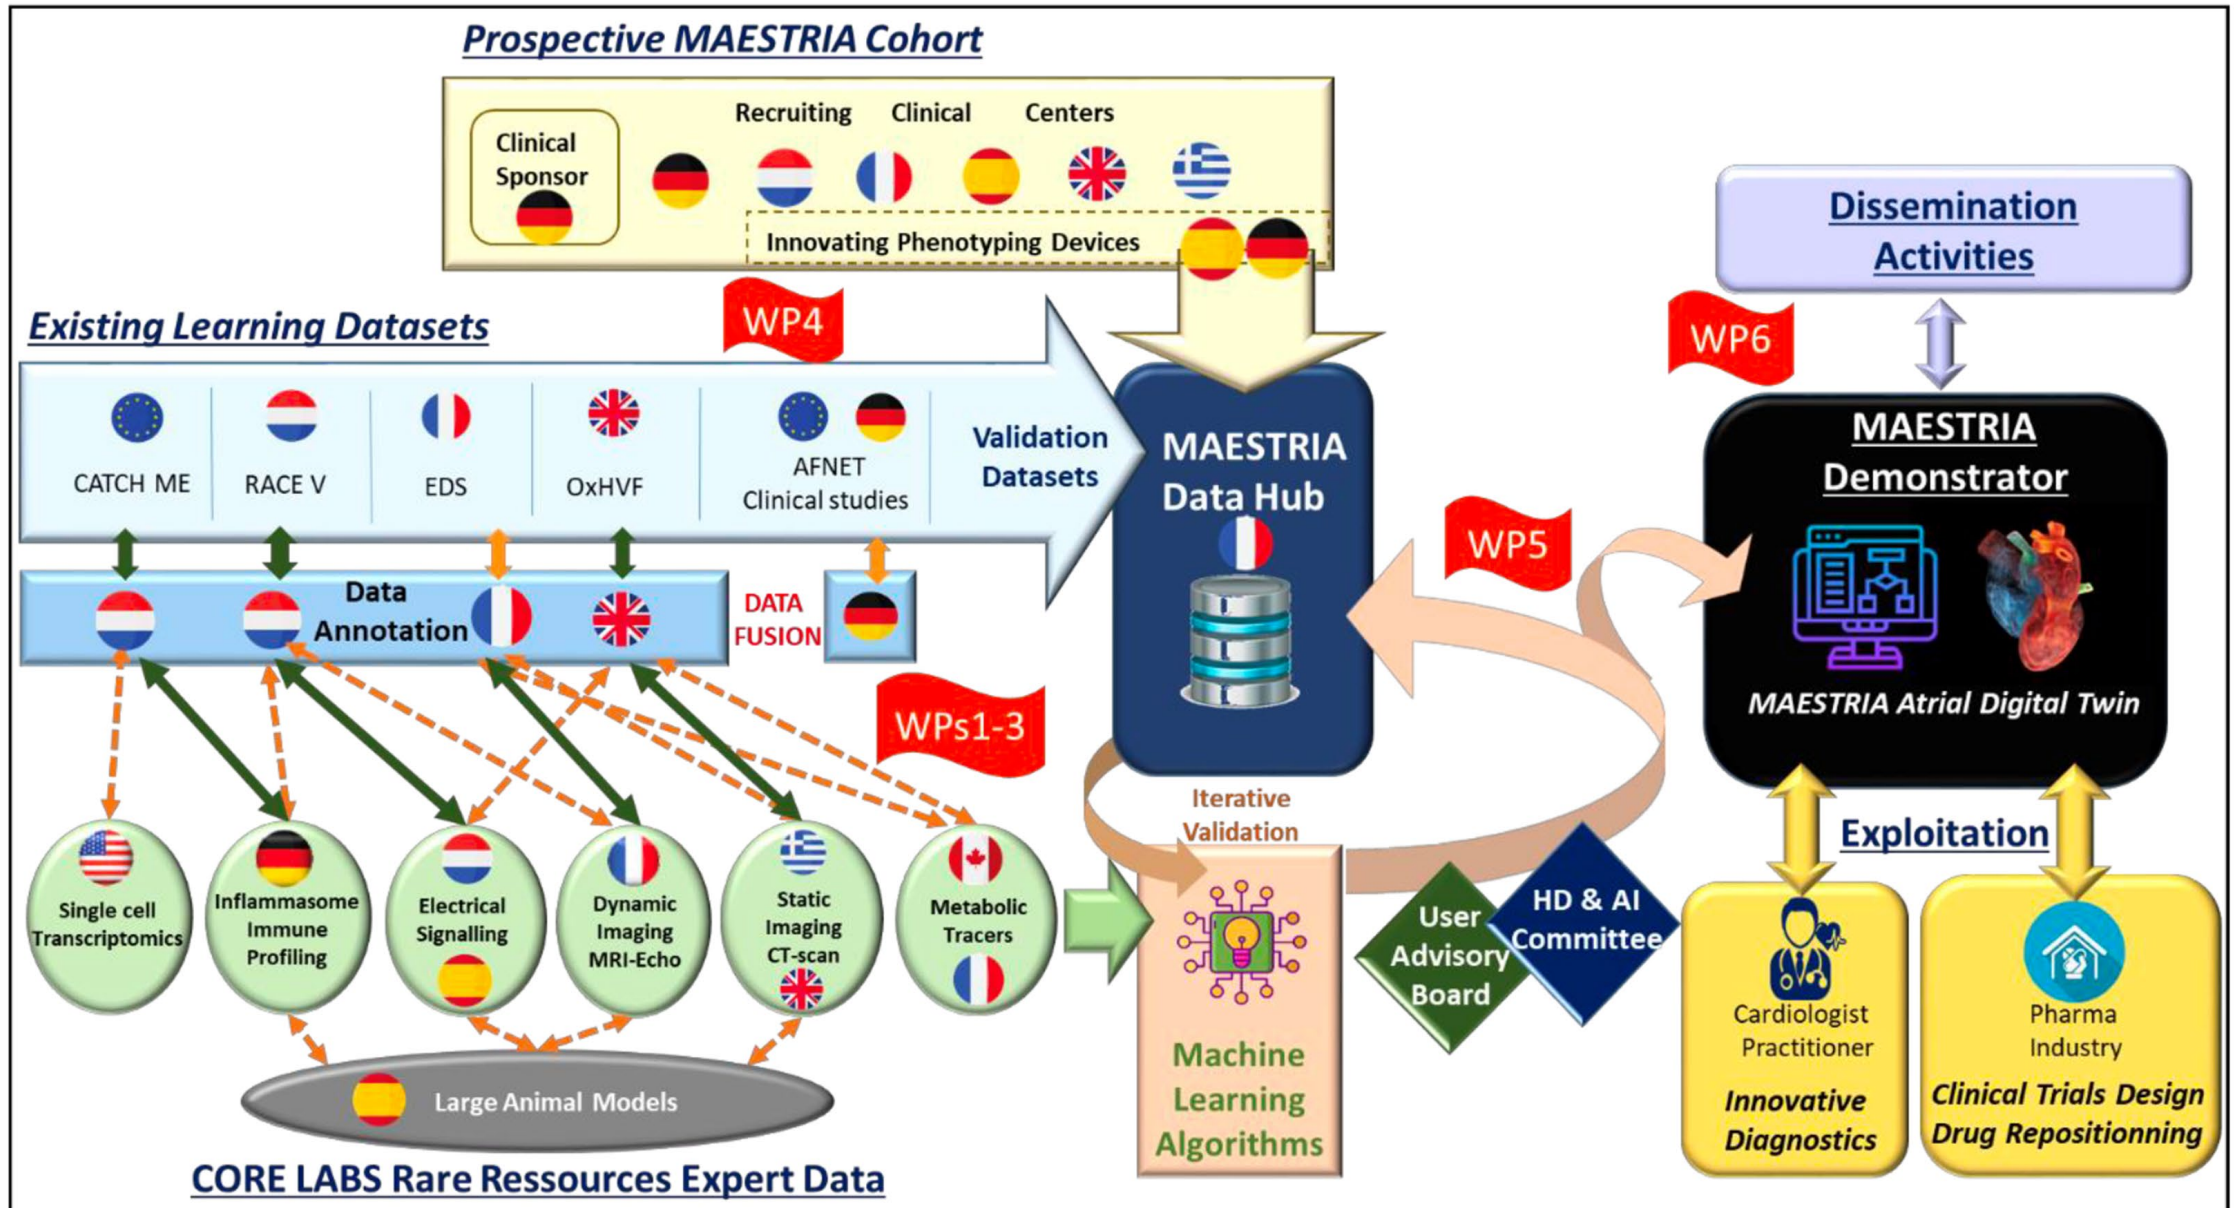

MAESTRIA:

Machine Learning and Artificial Intelligence for Early Detection of Stroke and Atrial Fibrillation

MAESTRIA

Prospective Cohort Study

International
Multicenter
Non-interventional
Observational
Registry

600 patients with AF:

3 groups {
200 paroxysmal AF
200 persistent AF
200 permanent AF

4 countries

20-30 sites

Study General Objectives:

- Enrolment of a representative cross-section of AF patients in Europe
- Detailed analysis of clinical & relevant parameters ((d)ECG, cardiac imaging, blood biomarkers) for diagnosis of Atrial cardiomyopathy & patient's outcome
- The datasets will be assessed using AI algorithms to characterise specific subgroups of AF or define novel outcome predictors

Device:

measuring bracelet for continuous monitoring of heart rhythm with a photoplethysmographic (PPG) sensor coupled with a smartphone app. Preventicus is ISO 13485 certified
